

WHAT IS CLAIMED IS:

1. A combination of a magneto-generator and a resin molding die, the combination comprising:

said magneto-generator having,

a) a bowl-shaped flywheel (11);

b) a plurality of magnets (12) mounted on an inner peripheral surface of said flywheel (11); and

c) a resin (14) filled around each of said magnets (12) for fixedly securing said magnets (12) to said flywheel (11); and

said resin molding die (21) having,

a) an outer peripheral surface (21d) positioned in opposition to an inner peripheral surface of said flywheel (11), and

b) projections (21a) provided in said outer peripheral surface (21d) abutting against and retaining said plurality of magnets (12) in a circumferential direction at predetermined positions, respectively.
